► PRINCIPLE OF OPERATION

The Anden Model A100 Medium-Capacity Commercial-Grade Dehumidifier is designed to dehumidify the air coming into the unit by passing the incoming air over an evaporator coil to drop the air temperature below the dew point of the air. Moisture is removed from the air and drained out of the unit to a common floor or waste drain. The air is then reheated in the condenser coil and exits the unit.

Dehumidification occurs until the set point is reached, then shuts off until periodic sampling determines a need for operation.

► APPLICATION

The Anden Model A100F is the perfect solution for the precise management of humidity required in an indoor growing environment.
